To make a FLOWER diagram, answer these three questions:

1. **Does the project protect the climate?** If your project reduces GHGs in the atmosphere, color the center of the FLOWER dark blue.

2. **Co-benefits?** For each of the six petals, ask: does my project produce this benefit? If yes, color the corresponding petal. If not, leave the petal uncolored.

3. **Who benefits?** For each petal ask: who receives the benefit?
   - If everyone benefits, shade evenly.
   - If the project most benefits marginalized groups, shade the outer edges more darkly.
   - If those already well off gain most of the benefit, shade the center of the petal darker than the edges.
